## 3 Reasons to Purchase a Solectrac Electric Tractor

There's no denying we've reached a pivotal point in the era of battery electric vehicles. To say going electric is the way of the future would be an understatement for both the consumer and the commercial side, but we also know it's an investment. The agriculture world is no different and while we understand the initial investment is higher than owning a diesel-powered tractor (and we may be biased), here's why we think our electric tractors are worth it.

### 1. **Customer Advocacy:** Our manufacturer warranty delivers peace of mind.

Beyond the low-cost maintenance and optimized user experience, we offer a product warranty that we're quite proud of. Solectrac offers a new 6-year limited warranty on our most popular products: 3-year/2000-Hour full machine and 6-year/3000-hour powertrain and main battery. For products under the new fully transferable warranty, we will repair or replace any covered genuine part that is defective during the normal and intended use of the product.

*"While many manufacturers don't guarantee their products through a warranty offering or leave it up to the dealer's discretion, operating with the highest level of integrity is paramount here at Solectrac."*  
– Mani Iyer, CEO

Customer satisfaction is at the core of what we do. We stand behind our products and want to provide our customers with peace of mind long after their delivery day. The Solectrac team works to ensure our products operate at their fullest capacity, and you can trust that we'll do our best to support any issue that may arise.

### 2. **Performance:** Our electric tractors rival the performance of diesel-powered tractors.

Solectrac electric tractors boast instant torque at 0 rpm, lower operating costs, and extended runtime with optional exchangeable battery packs without sacrificing the expected versatility of electric tractors, such as towing or lifting capabilities.

## BETTER PERFORMANCE

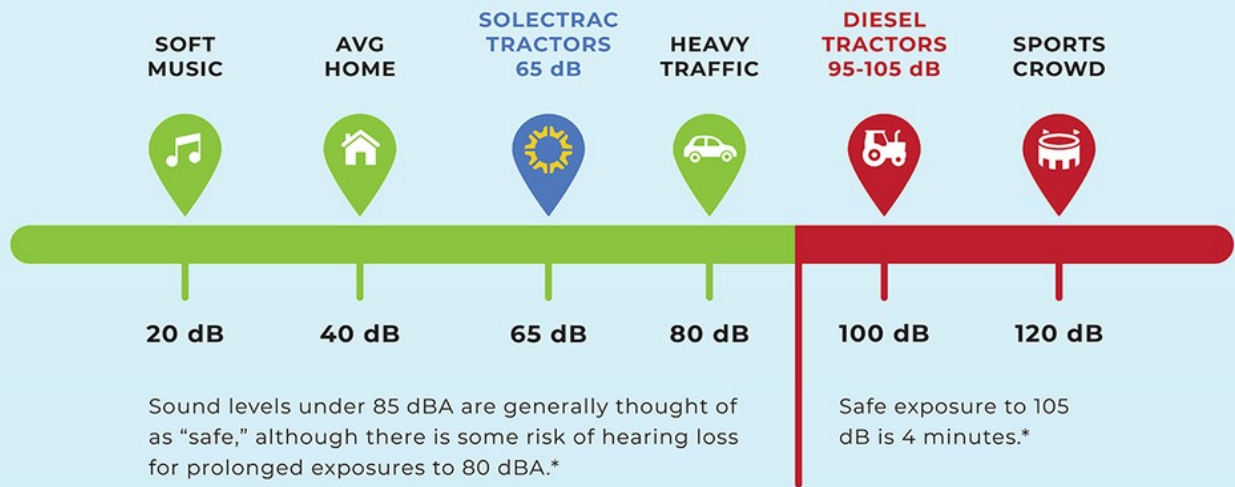

### 3. Improved Safety: Quiet operation is key to improving safety for operators and livestock.

Our zero-emission tractors improve operator, livestock, and environmental health by reducing air pollution, exposure to toxic diesel exhaust, and diesel particulates on crops and soil. While these things probably go without saying, you may not initially associate quiet operations with the many benefits of owning an electric tractor. The Solectrac experience is harmonious with nature. Our products are clean, quiet, and produce no exhaust, creating a healthier environment for all.

## IMPROVED SAFETY

Quiet Operation

\* NATIONAL AG SAFETY DATABASE

Ultimately, we know the concerns of transitioning to an electric tractor – Will it be reliable? Will the performance meet my expectations? Is it safer?

The greatest opportunity to address these concerns is proof. SolecTrac is the first company to bring electric tractors to the market. As the pioneer of electric tractors, SolecTrac is committed to electrifying the North American agricultural market, as well as helping small farms globally with access to clean, cost-efficient farming.

The e25 compact electric tractor can be ordered today with a \$1,000 refundable deposit, for delivery within 45 days. If you're a rural lifestyle looking to transform your farming experience, we invite you to join our community of owners and to reserve your electric tractor.
